- **Three lite slider**
- **Picture Window**

Portrait Series 1100

Portrait Series 1100 window system is now revolutionizing how windows are installed.

The unique integral flush fin system allows the 1100 series to be installed directly over existing window frames. With the Portrait 1100 system you will notice several important changes in the way windows are installed:

- The job is done in less time because it is no longer necessary to remove your window frames.
- The existing weather seal of your home is enhanced while creating additional thermal and moisture protection from the elements.
- The integral structural fin completes the beautiful finish even on stucco.

- Fusion welded dual wall construction for resistance to wind and water penetration.
- Three quarter inch (3/4") Double Strength insulated glass unit for excellent thermal efficiency.
- Multi-chambered slim line extrusion design for maximum strength and viewing area.
- Integral contoured pull rail for rigidity and ease of operation.
- Pocket sill design with triple weather stripping insures tight seal of operating sash against air and water infiltration.
- Exterior beveled master frame to enhance aesthetics.
- Positive interlock at meeting rail adds security and reduces air infiltration.
- Structural aluminum reinforcement at meeting rail provides resistance to outside elements and forced entry.
- Brass ball bearing roller system glides upon monorail track allowing weight dispersion and ease of operation.
